# Welcome

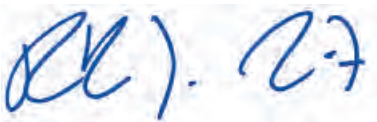

I warmly welcome you to the 2018 Horasis Global Meeting and sincerely hope that you will enjoy the discussions. My thanks go to the City of Cascais and the Portuguese Government for co-hosting the event.

The Horasis Global Meeting aims to be the world's foremost annual gathering of business leaders who interact with heads of governments and key ministers as well as Nobel laureates and other thought leaders. The meeting's purpose is to advance solutions to the most critical challenges facing corporations today. Participants share a common interest in mapping our global economies.

Under the theme 'Inspiring our Future', participants will share insights on the current state of the world which seems to become more fragile and fractious. It is time, now, to reset our trust in our institutions. We need both the vigour of youthful action and the wisdom of reflective diplomacy

The Horasis Global Meeting shall devise novel ideas to sustain and nurture our development in the future.

I wish you a thought-provoking and exceptional meeting.

Dr. Frank-Jürgen Richter  
Chairman

# Changing the future

The time we are living is strange. Change is fast. Seismic. We do not know where we are going. We do not even know who we are going with from one minute to the next. The constancy of international politics has been shaken. Decade old alliances are breaking and the international order is increasingly disordered. In many parts of the globe tension is high and the rhetoric is dangerously belligerent. In other places, such as Syria, Venezuela or Myanmar, human suffering feeds an exodus that appears to have no end.

From a domestic viewpoint, illiberalism is growing within western societies. Populism has left the streets and moved directly towards some European chancelleries. Democracy appears to be losing its appeal and a growing number of people seem to have become seduced by behaviours originating in other latitudes.

At the same time, the globalisation, innovation and technological progress which feed the Forth Industrial Revolution promise, once more, to change the way we work, do business and live in society.

It is a paradoxical time. Never have we been so close together as far as the matters of men are concerned, however, we have never been so far away from one another. Never before have we been so interdependent economically, socially and environmentally speaking. Nevertheless, we have not lost a taste for belligerence, for isolation and for walls – be they real or imaginary.

We need to set on pause the present which has forgotten the past. We desperately need to change the course of the future. To change it – but not to close our eyes or be complacent with stamping upon human rights. To change it so that freedom will not be the price to pay for a few decimals of growth of the GDP. To change it so that our citizens may be entrepreneurs, our companies may grow, and our countries may thrive. To change the future so that it inspires us. This is Frank Richter's and the Horasis' proposal, one which in Cascais we claim as our own. Cascais, being historically a meeting point of diverse peoples and cultures, is the right place to inspire a new time of humanism and responsibility; of development and sustainability; of concord amongst nations and peace amongst men.

All of you, please feel very welcome to Cascais, it is the place where we have the ambition to change the future.

Capital markets are complex, mediated by computers, fast moving and global. ### Radicalism (Room B)

Youth unemployment has been a growing global phenomenon for years – adolescents seem very easily persuaded by extremists to be violent against their perceived oppressors. What can be done in the short-term to guard against their anger? And what is the long term solution to tackle terrorism?

### Shaping and Governing Globalization (Room D1)

### Delivering on Infrastructure (Room E)

The great wave of infrastructure development from the 1960s through today now demands a re-think. Deeper interconnectivity is needed to offer end-to-end digital processing so the system can even query if we ordered the correct item. How close are we to creating a global mesh capable enough to be a life-support system? What new international accords are needed?

- **Alvin Carpio**, Founder and Chief Executive, The Fourth Group, United Kingdom
